- IC - A61K7/16
- AB - JP2000026260 NOVELTY - Buccal composition contains one or more of geraniol, octaacetylated sucrose, phenylethyl alcohol, brucine, linalool, diethylphthalate, linalool acetate, benzylacetate, denatonium benzoate and capsaicin and one or more of menthol, thymol, cineole, cinnamaldehyde, eugenol, citronellal, vanillin and xylitol. DETAILED DESCRIPTION - A buccal composition contains: (A) one or more of geraniol, octaacetylated sucrose, phenylethyl alcohol, brucine, linalool, diethyl phthalate, linalool acetate, benzylacetate, denatonium benzoate and capsaicin; and (B) one or more of menthol, thymol, cineole, cinnamaldehyde, eugenol, citronellal, vanillin and xylitol. Preferably, the composition contains 0.001-5 wt.% of one or more effective ingredients for a dentrifice. Preferably, the composition is a liquid formulation.
- USE - The composition is e.g. a gargle, liquid, wetting and powder dentifrice and tooth paste.
- ADVANTAGE - The composition has sufficient stimulation or bitterness to prevent unintentional intake and gives a good feel during use.
